Equi-Sel

Organic liquid selenium

What is Equi-Sel?

Equi-Sel is a liquid form of Selenomethionine, which is selenium bound to the amino acid methionine, rather than the inorganic form, sodium selenate.

As the organic form, Selenomethionine is actively taken up from the intestine and used by the horse during protein synthesis. Inorganic selenium, sodium selenate, is not actively taken up in the intestine and needs to be converted by micro-organisms in the caecum and small intestine to an organic form before it can be absorbed. The majority of inorganic selenium is excreted in the faeces and urine with as little as 40% of sodium selenate being taken up by the horse.

What is in Equi-Sel?

Equi-Sel contains:

Selenomethionine 200mg Se per litre providing 1mg Selenium per 5ml.

Dosage:

Dosage:	Ponies	Horses (over 500kg)
Once a week	10ml	25ml
Once a month	50ml	125ml

Administration:

Equi-Sel can be administered orally or mixed with feed. Do not exceed stated dose.

Warning: Do not exceed the recommended dose unless directed otherwise by a veterinarian. Do not use with any other product containing selenium without consulting a veterinarian. Regular liver and blood testing should be used to determine actual selenium status.

Precautions: (human) Harmful if swallowed, inhaled or in contact with the skin. May cause damage to organs through repeated exposure. Suspected of causing genetic defects. Wear protective gloves and use personal protective equipment as required. Do not eat, drink or smoke when using this product. Wash hands thoroughly after handling. Wash contaminated clothing before re-use.
